

How Long Does It Take to Get a Flat Stomach So I Can See My Six Pack Abs?

How Long Does It Take to Get a Flat Stomach? Most people have no idea how long it takes to actually see their six pack abs. Here is the formula. If you are wondering how long does it take to get a flat stomach so you can see your abs, then this video is for you. Because in it I'm going to provide you a complete formula that you can use to determine how long it's going to be before you see your six-pack.

Hey everybody, how y'all doing, Peter Carvel here from six-pack factor.com. Now this week's question comes from Stephen in the UK. And here is Peter's question. Do you have a formula that I can use to determine how long does it take to get a flat stomach so I can see my abs? I've been seeing great progress. I've been losing fat, but I just want to have an indication of how much longer it will take.

Well, that's exactly what I'm going to do in today's video. We're going to talk about what it actually takes to get six-pack abs. And then I'm going to show you the formula that you can use to determine how quickly you can get six-pack abs. And then if you still have no idea how to get started, at the end of the day's video I'm going to provide you of a free solution that you can start using today to get closer to getting six pack abs ASAP.

How Long Does It Take to Get a Flat Stomach

So, what do you actually need to get six-pack ABS? Well, you need a low enough body fat percentage and you need to have well-developed abs. And that isn't that difficult to actually achieve guys, if you follow a proper program.

But we'll talk more about that in a second. To actually use the formula I'm going to show you in a second, to determine how quickly you can get six-pack abs, you need to know three things:

1. How low your [body fat percentage](#) actually needs to be before you get a flat stomach so you will see your six-pack.
2. How quickly can you actually lose body fat?
3. What is your current body fat percentage?

Just How Long Does It Take to Get a Flat Stomach?

What is Your Target Body Fat Percentage

So let's get going with the first one. **How low does your [body fat percentage](#) need to be before you'll see your six-pack?** Well for guys, it's anything between 10 and 7. At 10 you'll start seeing it, and at 7 it will be really visible and a really well defined six-pack. And for females, it will be anything between 20 and 15. Once again, at 15 it will look really good, and at 20 you'll start seeing it. One word of caution for females, anything below 15 it can become unhealthy. So a word of caution. Don't go that low; you don't need to go that low to see your six-pack and to have a great looking body.

How Fast Can You Lose Body Fat

So, number two: **how quickly can you lose body fat?** Well this is obviously a massive, controversial topic. So you know that I used to look like this. I got myself into shape and got my six-pack abs. And I've kept it off for over 10 years. Over the last seven years, I've been lucky enough to help hundreds and thousands of people to also get six-pack ABS right there at home. So I'm telling you that, not to brag, but that the information I'm going to share with you right now is based on

real-world and real-life examples.

So I know for a fact, because I did it, that you can lose 1% body fat per week if you are really focused and really dedicated, without starving yourself and without taking fat burners for breakfast lunch and dinner. Just simply following a proper program and being very dedicated to that program. I've also seen some of my clients doing one percent body fat per week over a six week period. But guys, on average I have seen anything between point two and point six percent body fat per week that people can lose. That is average. So that is what you should work on. And always remember, we're all individuals, okay. You can have five of the exact same guys here, same height, same age, following the exact same program, and they will all lose fat at a different rate. So don't compare yourself to anybody. Focus on progress and just make sure that every week you pushing closer to your goal. As long as you do that you are doing fine.

What Weight Are You Losing?

Just one word here as well, and people actually telling you you need to focus on losing weight slowly, or you need to lose 1 to 2 pounds per week, and no faster. Well the problem with weight is that you can lose water weight, muscle, and many kind of things. We want to focus, if you want to expect abs, I'm losing actual fat. So I would say focus either on getting a body fat measurement done on a weekly basis or sometimes progress photos can provide an even better indication than the scale, for example, and whether you are getting closer to your goal and losing body fat.

Formula That Answers the Question: How Long Does It Take to Get a Flat Stomach?

So guys, now you know what you need to get down to. Now you know how fast you can lose your body fat. Now you need to determine what your actual own body fat is.

Weeks to see your six-pack = (Current BF% - 7) x 0.5

So for example, and let's go through the formula now. For example, let's say you a guy you had 13 percent body fat, and you want to get down to 7. So that's six percent body fat that you want to get rid of. Let's work on average of losing 0.5 percent body fat per week. That gets us to 12 weeks it will take you to get down to 7 percent and see your six-pack abs. So, that's the simple formula guys. You simply take where you are right now as far as your body fat, subtract seven, okay. And if you're female subtract 15. And then multiply that by 0.5.

So that is a guideline guys. Remember, like I've said, we will all lose fat at a different rate. We all start at different places. And your metabolism is different. Our genetics are different. The hormone profile is different. And all those things can play a role. So simply use this as a guideline and something to work towards.

But guys, that's how simple it is to get an indication of how quickly you can get six-pack abs. And then one final thing, guys, if you do get down to 7% for guys and 15% for females and you don't see your abs, or your stomach is just flat, that simply means that you need to focus on developing your abs a little bit more. And you need to focus on the program. It will help you build your abdominal muscles.

Now for those people who still have no idea where to get started, or what to do, guys. I've set up a brand-new and 100% free challenge for you to come and do. It's only workouts but at least you'll start understanding the kind of workouts that you need to do to lose your belly fat and start getting six-pack abs. And you can go to six week six-pack comm forge last 21-day challenge and sign up. They're 100% free of charge.

So there you go, guys. You know know **"How Long Does It Take to Get a Flat Stomach?"**

If you like this video click on the like button. Please subscribe and let's have a chat. Let me know where you are right now and where you'd like to get down to. And then it's time to take action, get focus, and push hard towards reaching that goal of yours of getting six-pack ABS.

So, there you have it. Thank you so much for watching. Until the next one keep it simple and have fun out there. Bye, bye.

Six Pack Abs Workout at Home with No Gym Equipment!

Today I have something very special for those of you that don't have access to a gym. This is a six pack ab workout at home with no gym equipment. This six pack exercise routine can be done right in your own house without the use of any gym equipment.

And even though I'm a big fan of using weights while working the ABS, there are ways of increasing the intensity of a regular body weight ab workout without using equipment like weights. So today in this video I'm gonna share the most powerful six pack AB workout that you could do without weights. It's gonna involve exercises that are really intense and they're designed to fatigue your abs without the use of machines, benches, barbells or dumbbells.

Just one thing that I need you to keep in mind before we get started. For this workout and for these exercises to be

effective you have to make sure that you follow the tips on how to perform them correctly since we're not using weights. We can instead increase time under tension by going really slow on the negative portion of the contraction. For some of these exercises we can also hold a position and squeeze the ABS for a certain number of seconds before continuing the movement. So instead of just wrapping out these exercises as fast as you can, pay close attention to the way I want you to perform them.

Navy SEAL Situps

So this workout is going to start with a tough one. I call these Navy SEAL situps. Now if you can't do this one don't worry. I'll give you a regression in a second. But with the Navy SEAL sit-ups you start with both your hands at the side of your head and both of your feet slightly above the ground. Raise your upper body and your lower body up off the ground as if you're performing a V sit up. Except here you're going to be bringing one elbow to the opposite knee and then return back to the starting position. And bring the other elbow to the opposite knee once again. It's important that in this exercise you bring your upper body and your lower body off the ground at the same time. You're going to try to perform this exercise for sixty Seconds straight.

The regression for this exercise is a regular bicycle sit-up where rather than bringing your entire upper body to your lower body, and more of a sit-up, you would instead twist and lift your shoulder blade off the ground rather than your whole upper body. So with Navy SEAL sit-ups you're bringing your upper body completely off the ground, whereas with this one you're simply bringing your shoulder blades off the ground.

Now let's say that you can only get 30 seconds of the more advanced Navy SEAL sit-ups before the exercise becomes too difficult. That's totally fine. Simply move on to the regression halfway through. So as soon as you start failing,

just switch to the bicycle situps.

Leg Raises With a Pulse Up

After doing those for 60 seconds you want to move on to the second exercise with no breaks which is a leg raise with a pulse up. For this one start with both your hands under your butt. With your back flat on the ground and your feet slightly raised off the floor. Raise your legs all the way up until they're pointed straight towards the ceiling. Next, lift your hips up off the floor without rocking your legs. Once at the top of the movement, slowly lower your hips back down towards the ground. Aim for a solid three count when slowly coming back down. Repeat this exercise for 45 seconds.

If the pulses get too difficult at any point just switch to regular leg raises until the 45 seconds are up.

Crunches With Hands Sliding Over Knees

Right after you're done with those, switch into the next one with no break. This next one is going to be a crunch with an isometric hold. Here you're going to start with your hands on your thighs and your back flat on the ground. Slide your hands up over your knees to crunch up. But rather than going straight back down, hold that position for a three-second count. Then lower your back and your hands back down. Repeat this exercise once again for 45 seconds before moving on.

Cobra Stretch

Once you're done with this one you're gonna immediately flip over onto your stomach and perform a Cobra stretch. The Cobra stretch is more of a stretch to elongate your abs. But you can bet that after all those reps that you already did, if you do Cobras correctly, you'll definitely feel the burn. Start flat on your stomach with both your hands directly under your chest. Straighten your arms and extend your elbows at the same time. Look up towards the ceiling while keeping your hips

glued down to the ground. Hold this position for 15 seconds and then come back down and relax for five seconds. Then come back up into a Cobra again and repeat this three times. This stretch counts as your break. So try to enjoy it.

V Situps

As soon as you're done with all three 15-second stretch intervals flip right back over onto your back for V situps. Here you're going to start flat on your back with both your hands above your head and your feet slightly above the ground. Bring your upper body and your lower body together, trying to reach for your toes with your hands. Then lower back to your starting position with your hands above your head and above the ground, and your feet slightly above the floor. Repeat this exercise for 60 seconds straight then drop your feet to the ground with your knees bent.

Long Arm Crunches

Stack one hand over the other and point your hands straight up towards the ceiling. Crunch up and reach straight up towards the ceiling. You're gonna repeat this one for 60 seconds before moving on to the next.

Jackknives

The last one in this sequence is going to be jackknives on the ground. Start with your hands directly behind your back and with your feet and your upper back above the ground. Bring your knees into your chest and at the same time bring your upper body towards your knees. Again you're gonna do this exercise for 60 seconds.

Cobra Stretch

Then flip over onto your stomach for another three rounds of the Cobra stretch.

Side Oblique V Situps

Now for the next three exercises we're going after the obliques. For the first one start on your side leaning slightly more towards your butt. Bring your elbow and your upper body off the ground as you raise your legs to meet your elbow. Perform 45 seconds on one side before switching over to the other side for another 45 seconds.

Side Oblique Crunch

Next you're gonna lay flat on your back. Stack your knees and turn them to the side. Your hands are gonna go to the sides of your head and you're gonna crunch straight up. Then lower yourself back down slowly. You want to crunch up and hold it for three seconds. This will also be done for 45 seconds per side.

Alternating Heel Reaches

For the last one you're gonna bend your knees into your chest and raise your upper back slightly off the ground as you reach side to side for your heels for this one. To be effective you really have to try to raise your shoulder blades up off the ground every time that you reach for your feet. Try to do this exercise for sixty Seconds straight.

If you're a beginner, completing all these exercises just one time through is probably more than enough of a workout. But if you're intermediate, I recommend taking a one-minute break and then repeating the whole thing from the very first one, starting with the Navy SEAL situps. If you're really advanced, you can repeat this entire workout circuit for three rounds. Each time you'll notice that it's harder and harder to complete the same exercises.

Remember that failure is fine and as long as you try to improve the amount you can do each week, You'll progressively develop better ABS right in your own house.

That's the *six pack ab workout at home*, guys. I really hope

this video has helped you out. If you enjoyed it make sure you subscribe to the channel. I have plenty of great free content just like this. And also feel free to visit my website. We're running a challenge right now to help people just like you get ripped ABS. As you know getting ripped ABS isn't just about working out but it's also very much about burning fat. With a proper diet my clients that have taken part in this program have been losing an average of 20 pounds or 5% body fat in six short weeks. To find out how you can get this program for free you can click the link below or you can visit my website www.marykay.co.uk/
